Abstract for 06 December 2018

It's the nearing the end of the season. Your team is doing well but is not at the top of the ranking. You are interested in whether they still have a chance to finish at the top, but there are too many games left for you to do all the calculations. This problem can be solved efficiently with a method that can also be used to schedule flights, and extract different segments from an image. Come to the Math Club to find out how!
